## **E Trimble R12** GNSS SYSTEM

## **KEY FEATURES**

+ + + + + + +

► Next generation Trimble® ProPoint™ GNSS positioning engine. Engineered for improved accuracy and productivity in challenging GNSS conditions.

+ + + + + + + + +

+ + + + + + + + + + + + + + + +

+

- 672-channel solution with Trimble 360 satellite tracking technology
- ► Trimble SurePoint<sup>™</sup> tilt compensation and precise position capture
- Trimble xFill<sup>®</sup> correction outage technology
- Support for RTK level precision Trimble CenterPoint<sup>®</sup> RTX corrections technology
- ▶ Optimized for Trimble Access<sup>™</sup> field software
- ► Android<sup>™</sup> and iOS platform support
- Cellular, Bluetooth<sup>®</sup>, Wi-Fi data connectivity
- Military-spec rugged design and IP-67 rating
- Ergonomic form factor
- > All day battery with built-in status indicator
- ► 6 GB internal memory

## Trimble R12 GNSS SYSTEM

- 1 Challenging GNSS environments are locations where the receiver has sufficient satellite availability to Challenging GNSS environments are locations where the receiver has sufficient satellite availability to achieve minimum accuracy requirements, but where the signal may be partly obstructed by and/or reflected off of trees, buildings, and other objects. Actual results may vary based on user's geographic location and atmospheric activity, scintillation levels, GNSS constellation health and availability, and level of multipath and signal occlusion. The current capability in the receivers is based on publicly available information. As such, Trimble cannot the current determines will be done motion with a feature motion and another the feature and the second second
- 2
- The current capability in the receivers is based on publicly available information. As such, Tirmble cannot guarantee that these receivers will be fully compatible with a future generation of Galileo satellites or signals.
  Precision and reliability may be subject to anomalies due to multipath, obstructions, satellite geometry, and atmospheric conditions. The specifications stated recommend the use of stable mounts in an open sky view. EMI and multipath clean environment, optimal GNSS constellations, along with the use of survey practices that are generally accepted for performing the highest-order surveys for the applicable application including occupation sup to 24 hours may be required to achieve the high precision static specification.
  Depends on SBAS system performance.
  Network BTK PEM values are referenced to the closest physical base station.
- Network RTK PPM values are referenced to the closest physical base station
- Network NIK PPM values are referenced to the closest physical base station.
  May be affected by atmospheric conditions, signal multipath, obstructions and satellite geometry. Initialization reliability is continuously monitored to ensure highest quality.
  RMS performance based on repeatable in field measurements. Achievable accuracy and initialization time may vary based on type and capability of receiver and antenna, user's geographic location and atmospheric activity, scintillation levels, GNSS constellation health and availability and level of multipath including obstructions such as large trees and buildings.
  Accuracies are dependent on GNSS satellite availability.xFill positioning without a Trimble CenterPoint RTX subscription and affects found are diading during without a Trimble CenterPoint RTX.
- Accurates are dependent on arXs satellite availability. Armit positioning without a infinite Genetroint RTX subscription ends after 5 minutes of radio downtime. Krill positioning with a CenterPoint RTX subscription will continue beyond 5 minutes providing the Trimble RTX solution has converged, with typical precisions not exceeding 6 cm horizontal, 14 cm vertical or 3 cm horizontal, 7 cm vertical in Trimble RTX fast regions. XFill is not available in all regions, check with your local sales representative for more information.
  9 RTK refers to the last reported precision before the correction source was lost and XFill started.
  10 Receiver will operate normally to -40° C, internal batteries are rated from -20° Ct to +60° C (ambient +50°C).
  11 Tracking GPS, GLONASS and SBAS satellites.

- Iracking GPS, GLONASS and SBAS satellites.
  Iz Varies with temperature and wireless data rate. When using a receiver and internal radio in the transmit mode, it is recommended that an external 6 Ah or higher battery is used.
  Varies with terrain and operating conditions.
  Ue to local regulations, the integrated cellular modem cannot be enabled in China, Taiwan, or Brazil. A Trimble controller integrated cellular modem cannot be used to obtain GNSS corrections via an IP (Internet Protocol) connection.
  Bluetooth type approvals are country specific.
